Update: Actual supply situation China

Dear Sirs.

the current spread of Corona virus infection in China lead to the extension of the Chinese New Year holidays. This affected Kingbright's production plant in Shenzhen as well.

Kingbright's production plant started its work again on 10th February. But since over 80 cities in China have been locked down or with strict community management, the Kingbright production plant currently operates with a production capacity of approx. 65% only. This naturally has an impact on delivery times.

For new orders our factory needs more time for production and we need to work with the following lead times:

| | |
|-----------------|---------------|
| SMD-LEDs | = 14-16 weeks |
| SMD Displays | = 14-16 weeks |
| THT-LEDs | = 14-16 weeks |
| THT Displays | = 14-16 weeks |
| THT LED taped | = 16-18 weeks |
| all other parts | = 22-24 weeks |

For large volumes above 1 million pieces of standard parts and THT LEDs taped above 100.000 pcs additional 1-2 weeks are needed.

We will keep you informed about further progress at our Shenzhen plant.

Due to the high volume of incoming orders, the Kingbright factory in Shenzhen currently needs more time to confirm the delivery time of our new orders, so it can take up to 2-3 working days until you receive our order confirmation.

Mit freundlichen Grüßen / With best regards

Udo Reinhold
